Subject: Brix Monitoring Well Locations

John,

We have reviewed the proposed well locations and the historical aerial photographs you sent us earlier in the week. We recommend the following modifications to the proposed plan beyond what was agreed to in our June 19, 2002 meeting:

1. Move proposed MW-2 approximately 5 to 10 feet southeast of B-15 to attempt to place this well in the potential topographic low in the silt unit (See Figure 3 of Work Plan Addendum 1).
2. Installation of a Monitoring well (MW-5) approximately 15 feet map north of B-18. The purpose of this wells is to assess potential sources of contamination detected in B-17 and B-18, define the lateral extent of groundwater contamination, and to provide a groundwater elevation data on the southern side of the historic surface water drainages (see 1961 aerial photograph) to evaluate groundwater flow directions. It is DEQ's opinion that based on the existing data, a data gap would remain in this area if the well is not installed.

Based on the discussion at our June 19, 2002 meeting we are comfortable with you moving forward with well installation. As we discussed we are expecting a brief letter summarizing your response to our June 11, 2002 letter. As required by the Voluntary Agreement, please notify us in advance of your sampling schedule.

Thank you.

Rod -

Attached is an aerial photograph with the well locations marked out. As discussed in our meeting on June 19, 2002, MW-1 was moved near the location of B-21 (between the USTs and the former fuel pump). The locations of MW-2, MW-3, and MW-4 remain as shown in the work plan.
